Murat Kurul

Junior UX/UI Designer

+44 7393 558168 mmuratkurul@gmail.com linkedin.com/in/murat-kurul Portfolio: muratkurul.com Richmond, London, UK

PROFILE

Junior UX/UI designer with a BA (Hons) in Industrial Design from Loughborough University. Uses user research, user flows, wireframing and prototyping in Figma to turn complex information into clear, accessible interfaces. Has redesigned and launched a live client website, designed a companion app for a food-safety scanner, audited a campaign against WCAG 2.2 AA, and interviewed 8 athletes for a thematic-analysis research study.

EDUCATION

Loughborough University, UK **Oct 2023 – Jun 2026**
BA (Hons) Industrial Design

- Modules included: User Research, Creative Ideation, Prototyping, Sketching and Visualisation, and Brand Identity.
- Dissertation: ran 8 semi-structured interviews with BUCS basketball players and used thematic analysis to show how the look and feel of footwear shapes confidence and identity.
- Major project (AERØ): tested early concepts with target athletes before any CAD, then retested a 3D-printed working prototype and refined it.
- Built strong time management by balancing full-time study with two seasons of BUCS basketball and a volunteering leadership role.

Loughborough University and University of the Arts London (UAL), UK **Sep 2022 – Jun 2023**
Level 3 Foundation Diploma in Art and Design

ACS Egham International School, UK **Sep 2020 – Jun 2022**
International Baccalaureate Diploma Programme

WORK EXPERIENCE

Contex Textile with sister company Conuk Ltd, Istanbul, Turkey **Jun 2025 – Jun 2026**
Product Design Development Intern
Textile sourcing and production partner for retailers and fashion brands, founded in 1997

- Redesigned the Conuk Ltd website in Figma and launched it, restructuring the information architecture around one clear story from idea to delivery.
- Designed an enquiry flow that sends new client enquiries from UK retailers and fashion brands straight to the founders.
- Designed brand presentation materials for buyer meetings, keeping one consistent visual identity across two sister companies.
- Worked with suppliers and factories on samples and specifications, designing within real cost and lead-time limits.

Outlier AI, Remote **Oct 2026 – Present**
AI Trainer (freelance, part-time)

- Evaluate AI model responses against detailed quality guidelines, giving written feedback that improves model output.

Grymsdyke Farm, Buckinghamshire, UK **Jun 2025 – Sep 2025**
Workshop Assistant and Designer, London Design Festival 2025

- Designed and built a chair from reclaimed farm timber, and supported public making workshops.

BMW PGA Championship, Wentworth Club, Virginia Water, UK **Sep 2023 and Sep 2024**
Hospitality Bar Supervisor

- Supervised a VIP hospitality pavilion across two championships, handling sponsor and guest requests under pressure.

UX PROJECTS

Drape, size guide for oversized clothing (self-initiated concept) **Nov 2026**

- Synthesised desk research and review mining into 3 insights on why shoppers misjudge oversized fits online.
- Mapped the user flow, wireframed and designed 5 high-fidelity mobile screens that show how each size falls on the shopper's build.
- Wrote a usability test plan with task scenarios and success metrics for 5 participants.

Fresha, food-safety scanner and companion app (team of 4) **2026**

- Storyboarded the user journey (unsure, scan, decide) and designed 3 companion app screens.
- Designed the Result screen to turn a raw sensor reading into one clear safety score with its CO_2 impact.

Tunnel Vision, PUMA × Prime Video (speculative campaign) **2026**

- Designed and built a responsive landing page, a 4-size HTML5 display set, a Lottie banner and streaming TV ad screens.
- Audited the work against WCAG 2.2 AA (contrast, motion, keyboard, forms, touch targets), with every check passing.

muratkurul.com, personal portfolio website **2026**

- Designed and built a responsive site with AI-assisted coding, tested from phone to desktop.

LEADERSHIP AND EXTRA-CURRICULAR ACTIVITIES

Loughborough Students' Union Action, Head of Action **Oct 2023 – Jun 2024**

- Led the hall's Action Committee, planning a programme of volunteering events with the Students' Union and local partners.

Loughborough University Athletic Union, BUCS Basketball Player **Oct 2023 – Jun 2025**

SKILLS

- **UX methods:** interaction design, user interviews, thematic analysis, usability testing, user flows, journey mapping, storyboarding, information architecture, wireframing, prototyping.
- **Figma and Framer:** wireframes, high-fidelity UI, components and prototypes; redesigned the live Conuk Ltd website.
- **Accessibility:** WCAG 2.2 AA checks for colour contrast, reduced motion, keyboard focus, form errors and touch targets.
- **Front end and AI:** HTML, CSS with a token-based design system (colour and type variables), Lottie, AI-assisted coding (Claude), Higgsfield for concept imagery.
- **Visual design:** Adobe Illustrator, Photoshop, InDesign, Canva Pro (5 years), Procreate.
- **Languages:** English (fluent), Turkish (fluent).

CERTIFICATIONS

- Google UX Design: Start the UX Design Process: Empathize, Define, and Ideate (2026)
- Accenture Digital Skills: User Experience; Great Learning: UI/UX Design for Beginners
- University of Maryland (edX): Product Design, Prototyping and Testing

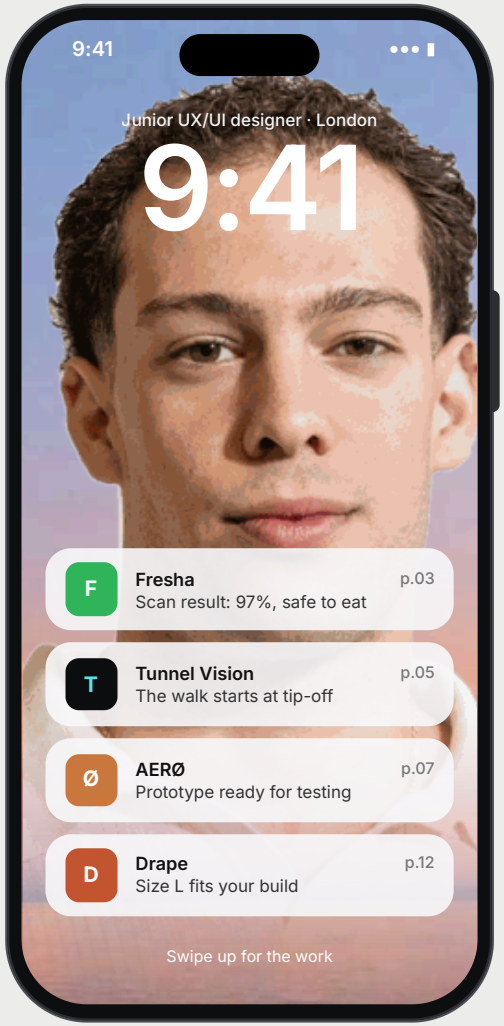

---

INTERESTS

- **Building with AI:** designed and built a Roblox chase game, Outpace, including its lobby and interface.
- **Basketball and fitness:** two BUCS seasons for Loughborough; still train regularly.

MURAT KURUL

Selected work 2024 to 2026 · Fresha · Tunnel Vision · AERØ · Drape

About

Hi, I'm Murat. I design things people use every day, on screen and off it.

I studied industrial design at Loughborough, so I learned to design by making things people hold. Every project started with interviews and testing, long before any CAD.

Then I spent a year at Contex Textile in Istanbul and redesigned the Conuk website, which went live. That's when screens hooked me. I taught myself web design with AI, YouTube and online courses, and I haven't stopped since.

I'm usually the person who ends up holding a project together, turning a messy brief into one clear next step.

Based in
Richmond, London

Studied
BA Industrial Design, Loughborough

Looking for
A junior UX/UI or product design role

Tools
Figma, Framer, HTML and CSS, Illustrator, Photoshop, Canva Pro

Methods
Interviews, usability testing, user flows, wireframes, prototypes

Off screen
Basketball, the gym, food and climbing

Case study 01 · Group project, Loughborough 2026

Fresha: from a raw sensor reading to one clear "safe to eat".

People throw food away because they can't tell if it has gone off, not because it has. Fresha is a handheld scanner that reads spoilage gases and answers in seconds, with an app that turns every meal saved into CO_2 saved.

My role
Storyboard, 3D model, prototype, 3 app screens including Result

Team and time
Up to four designers, 6 weeks

97%
Safe to eat

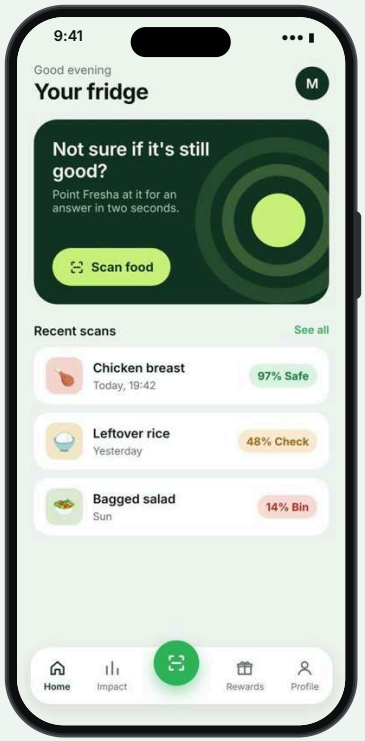

48%
Use your judgement

14%
Likely contaminated

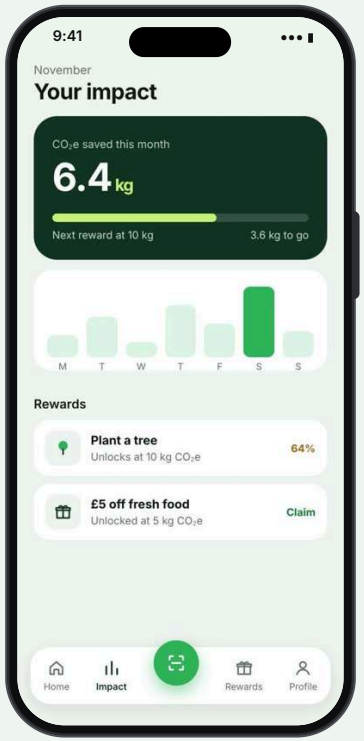

One-handed body, fold-out stand, a sensor head that sits close to the food without touching it, and a screen that answers with colour first.

One action on Home, one answer on Result, one reason to care on Impact.

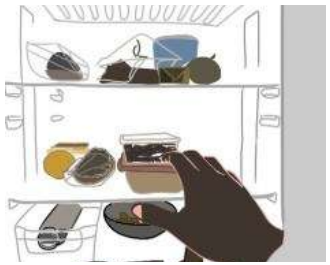

Home: one job
A single "Scan food" action, with recent scans below so leftovers can be checked again.

Result: the answer first
One number in a ring, a plain verdict ("Safe to eat"), then the detail. Green, amber and red always come with words, never colour alone.

Impact: a reason to care
Every meal saved becomes CO_2e saved, which unlocks rewards like planting a tree.

Redesigned in 2026
I updated my original screens to a cleaner, current UI for this portfolio.

1 What's still good?

2 The sniff test fails

3 Point Fresha at it

4 Read the answer

5 Green means safe

6 Eat with confidence

Tunnel Vision: one idea, designed to the rules of every screen.

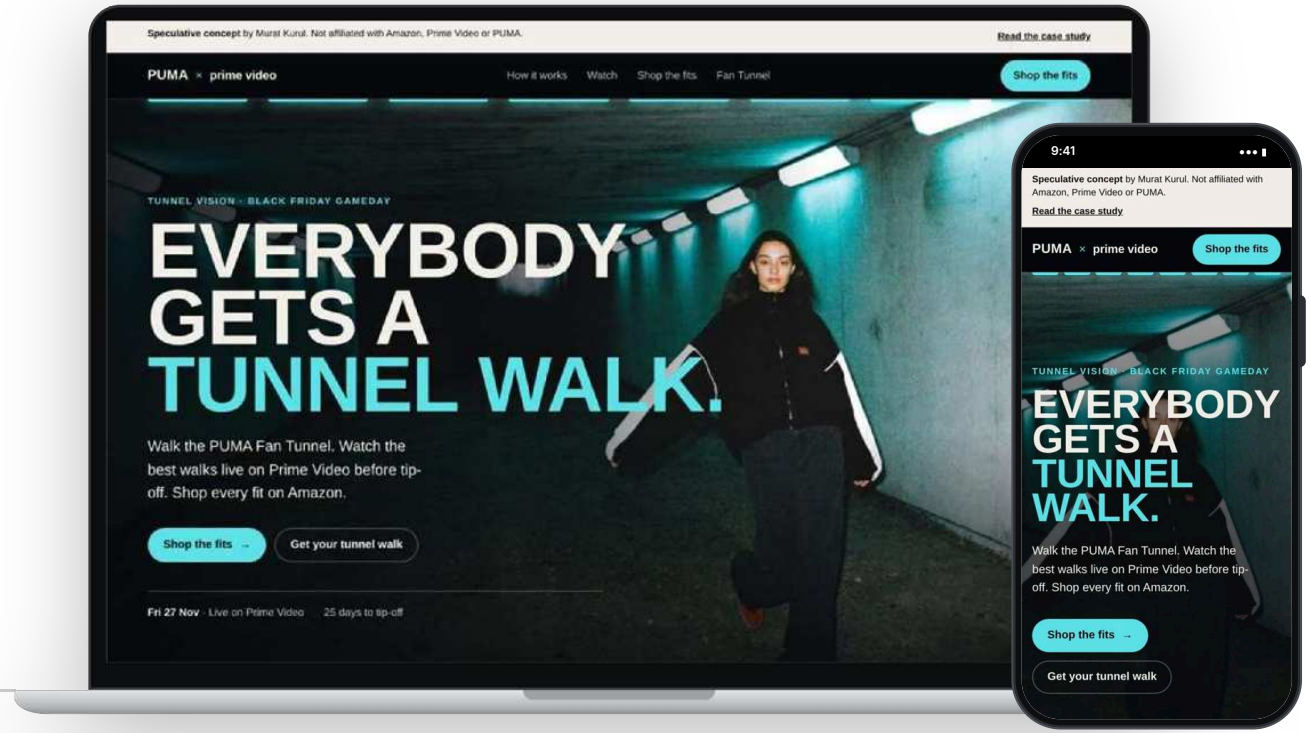

A spec PUMA × Prime Video campaign. I designed and built a responsive landing page, a four-size HTML5 display set, a Lottie banner, a Fire TV feature and a Prime Video pause ad, each to that surface's specification.

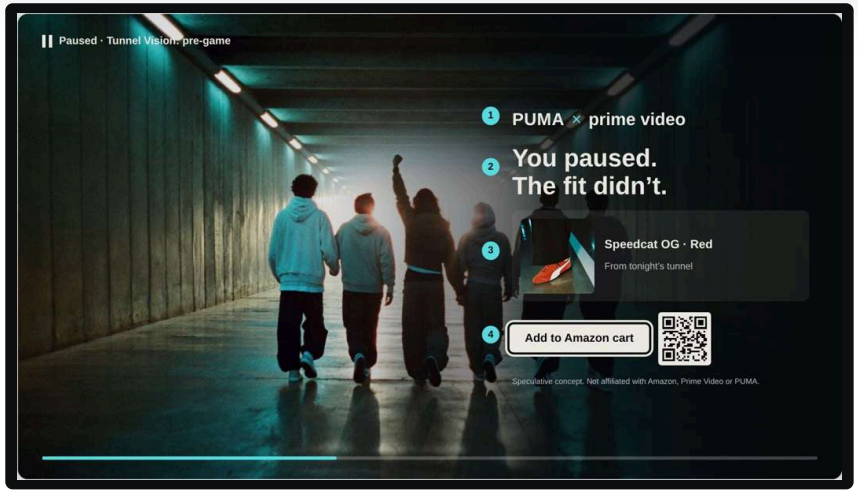

Honest by design
The spec notice loads first, and the cart and sign-up buttons say plainly that nothing is sent.

Built for handover
The landing page uses Webflow-style class naming, so it can be rebuilt one to one.

Pause, don't interrupt
The ad appears only when the viewer chooses to pause: one product, one action, a QR code.

Not affiliated with PUMA or Amazon. Photography AI-generated (Higgsfield) and retouched by me.

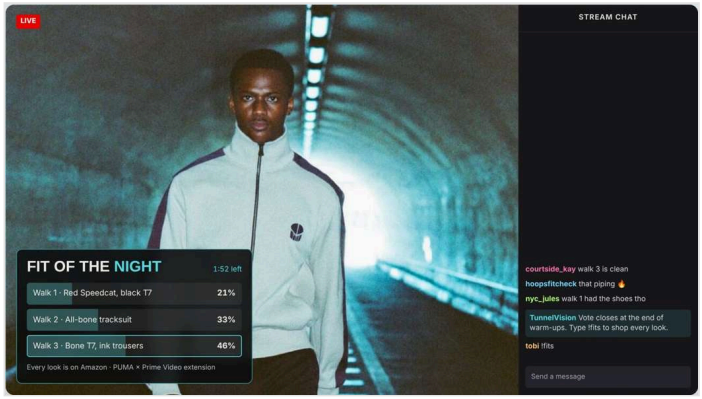

Prime Video pause ad: brand mark, a 27-character headline, the product and one remote action. It appears only when the viewer chooses to pause.

Checked against WCAG 2.2 AA before launch, from colour contrast to keyboard focus.

Check	Detail	Result
Bone on Ink	Body and headline text	**17.4 : 1 pass**
Ink on Tunnel cyan	Every call-to-action button	**12.7 : 1 pass**
Fog on Concrete	Secondary text on panels	**10.3 : 1 pass**
Motion	Reduced-motion users see end frames; banners play once, under 10 s	**Pass**
Keyboard	Skip link, visible focus, labelled ads and mock-ups	**Pass**
Forms	Visible labels, errors beside the field, focus moves to the error	**Pass**
Touch targets	Buttons and fields at least 44 px tall	**Pass**

300 × 250 HTML5 banner: plays once, ends on the call to action.

Twitch "Fit of the Night" vote extension.

Case study 03 · Final-year project, Loughborough 2026 · Industrial design

AERØ: a shoe dryer you clip in after training.

Sweat stays trapped in sports shoes after a session, causing odour and bacteria. Air drying is slow, and most shoe dryers are bulky and need a plug. AERØ is battery powered, has a handle and is small enough to live in a kit bag.

My role
Research, concept, CAD, prototyping and brand (solo)

Timeline
10 weeks

Tools
SolidWorks, KeyShot, Illustrator, 3D printing

Outcome
Working 3D-printed prototype

> 250,000 sweat glands in the feet can produce around half a pint of sweat a day.

Tested before any CAD
Early concepts went to target athletes first, the same habit I bring to screens.

Designed for the kit bag
A handle and carabiner so it clips on and is forgotten until it's needed.

Clip in after training

The product

The problem

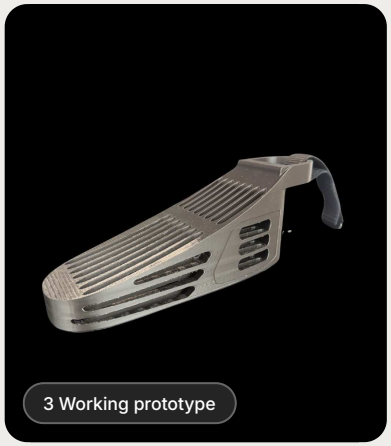

Lives on the kit bag

One per shoe

From athlete feedback to a working prototype, and a brand on the shelf.

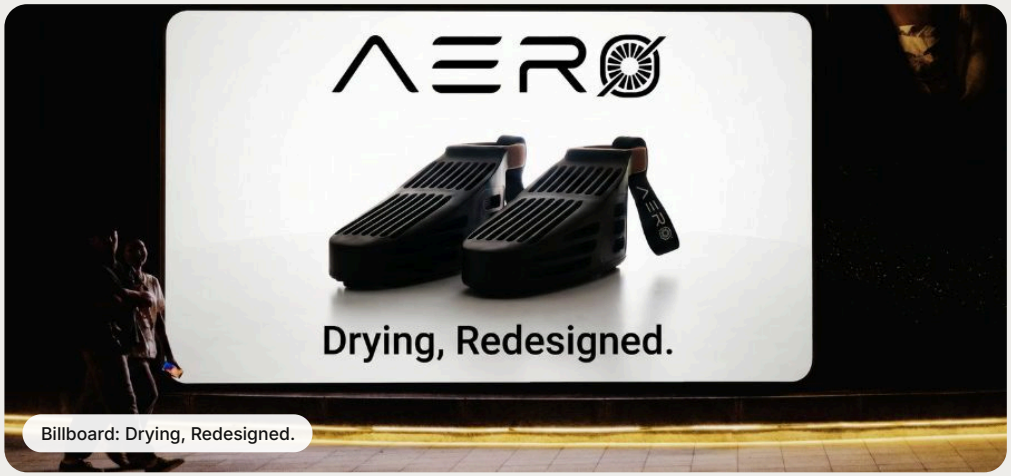

1 Tested with athletes

2 Fan, PCB and battery inside

3 Working prototype

In store: sports-retail display

Billboard: Drying, Redesigned.

One brand system, from the slashed Ø logo and a single orange to the shelf and the billboard.

What players wear changes how they play.

How does the look and feel of basketball footwear affect players' confidence, identity and performance? As a BUCS player myself, I could interview athletes as a teammate, not an outsider.

8
BUCS players interviewed

1 : 1
semi-structured conversations

TA
thematic analysis of transcripts

Method

Plan
Interview guide built around confidence, identity and performance.

Interview
Recorded and transcribed eight 1 : 1 conversations.

Code
Coded transcripts and grouped the codes into themes.

Apply
Turned the themes into design principles for later projects.

Findings I still design by

Start with the person's own words, then design.

How a product looks changes how confident people feel using it.

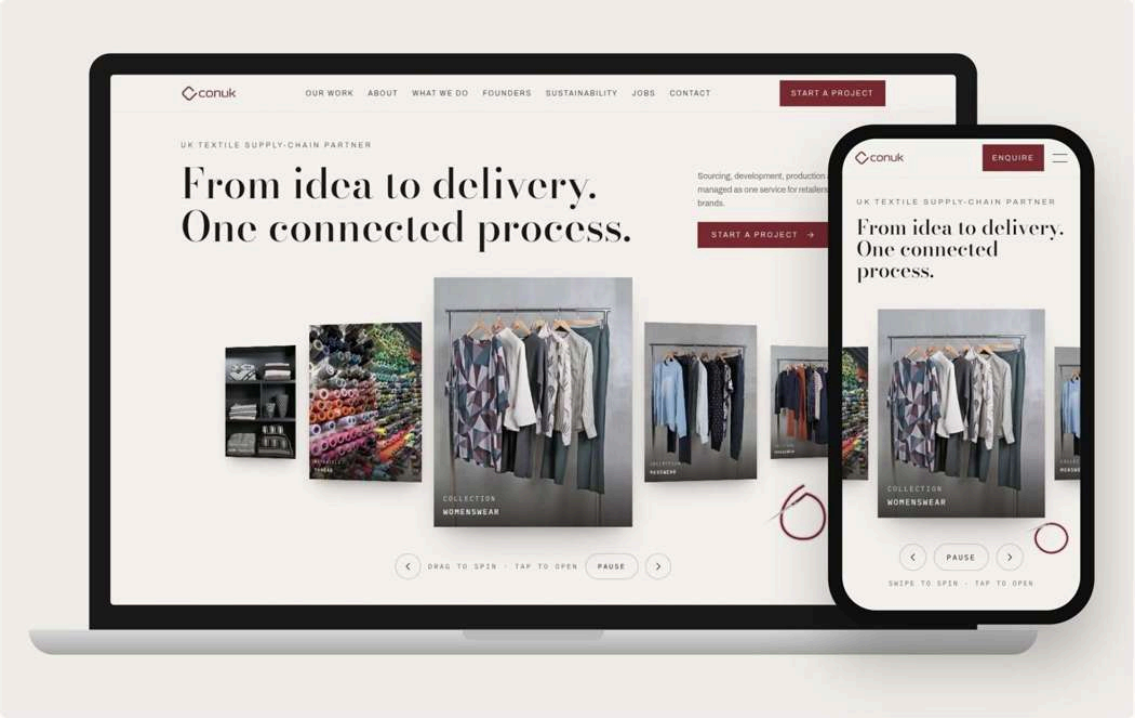

Identity matters as much as performance.

Two live sites, from Figma to launch.

conukltd.co.uk, for a client. At Contex I redesigned the Conuk Ltd website in Figma and took it live. I rebuilt the information architecture around one story, from idea to delivery, for UK retailers and fashion brands, and designed an enquiry flow that goes straight to the founders.

muratkurul.com, my portfolio. Projects arc over the bay of İzmir, then each opens as its own case study. I designed it and built it with AI-assisted coding, and tested it from phone to desktop.

Information architecture · Figma · Responsive · Live

conukltd.co.uk, live: desktop and mobile

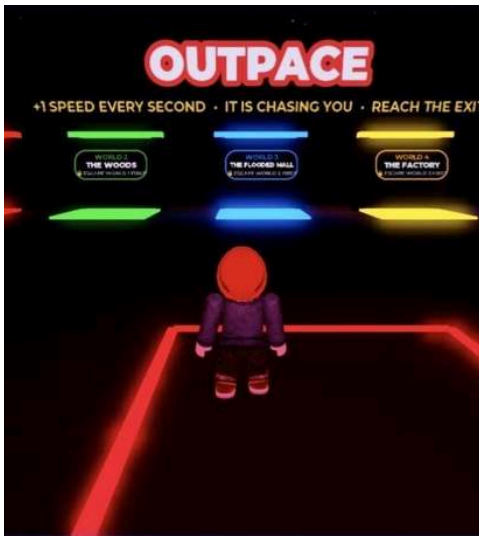

muratkurul.com, live: desktop and mobile

Outpace: a lobby that explains the game at a glance.

My Roblox chase game. New players landed in a dark, empty room with one red pad and no idea what to do. I redesigned the lobby around the one rule (+1 speed every second) and a colour-coded pad for each world.

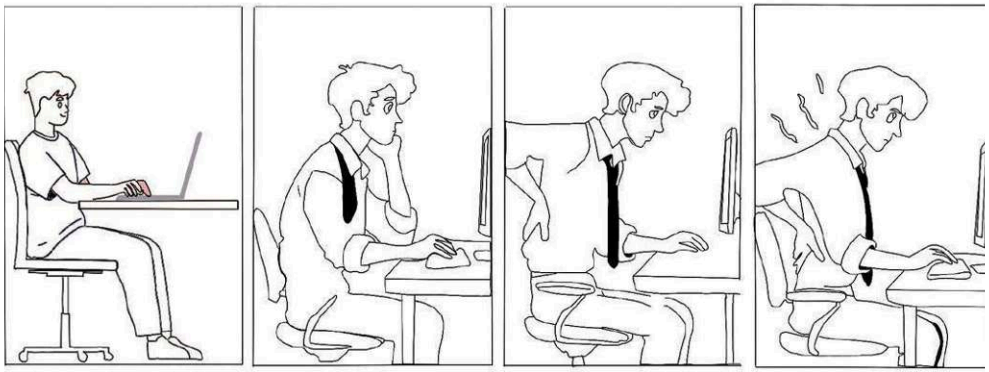

Before

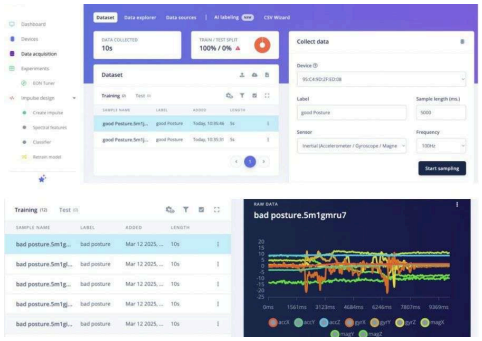

After

Postura: interaction design with no screen at all.

An Arduino wristband with a classifier I trained in Edge Impulse on motion data. It learns good and poor posture, then vibrates to nudge you upright. The feedback is a feeling, not a notification, so there is no app to open.

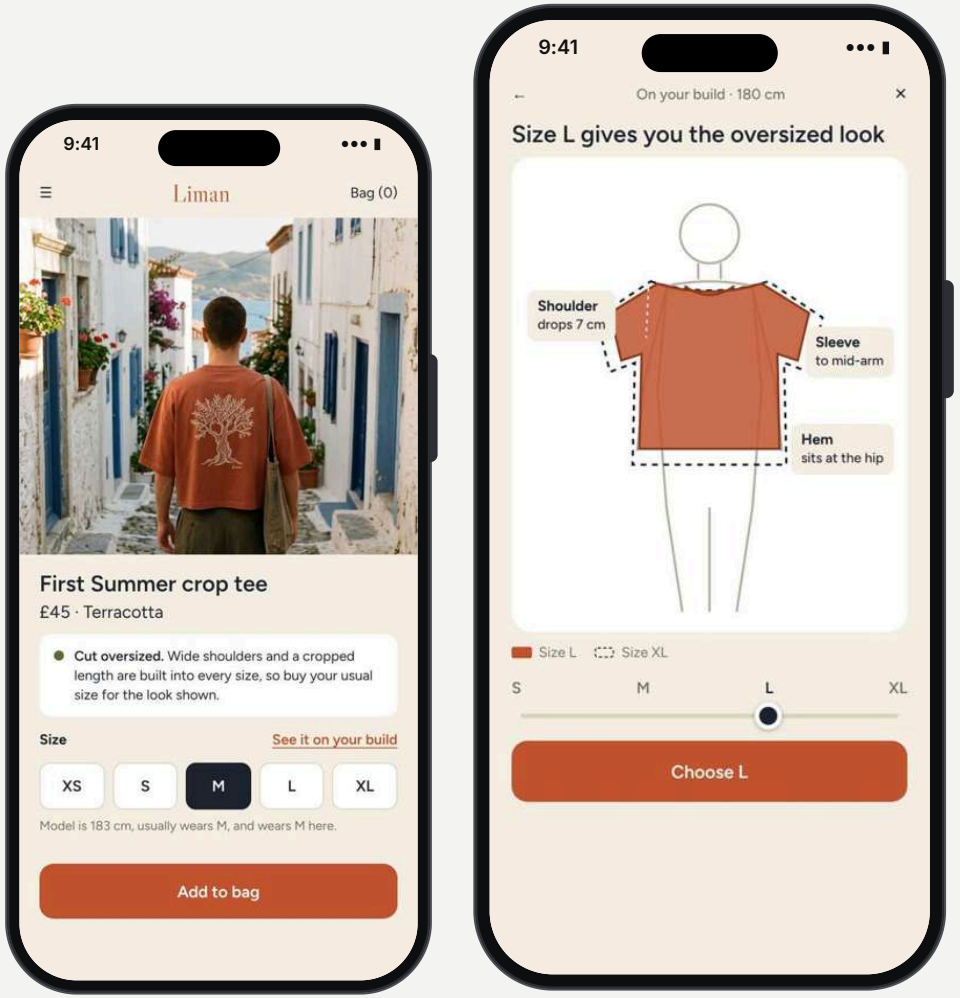

Drape: buy an oversized fit without guessing.

Shoppers can't tell whether "oversized" is already built into a cut, so they size up, size down or buy two. Drape shows how each size will fall on your own build, then recommends one.

My role	Timeline	Platform	Status
Solo: research, flows, wireframes, UI, test plan	1 week, Nov 2026	Mobile web, Liman shop	Concept, ready for usability testing

> Online clothing has a 24.4% return rate, and size and fit is the top reason.
> Coresight Research, 2023

Desk research · Review mining · User flow · Wireframes · Mobile UI · Test plan

Size charts give numbers. Shoppers want to know how it will look on them.

53%

of apparel sellers name size and fit as the top return reason

Coresight Research, 2023

87%

of mobile apparel sites don't give enough sizing information

Baymard Institute

48%

of shoppers read reviews mainly for size and fit details

Baymard Institute, 2026

2 sizes

Some shoppers buy two sizes to be sure one fits

Baymard usability testing

Review mining: what shoppers actually ask

I read sizing threads on five fashion subreddits about buying oversized tees online. The same question appeared again and again, with three opposite answers.

"Size down, it's already cut big" "Buy your usual size" "Size up one or two"

Paraphrased from r/malefashionadvice, r/uniqlo, r/femalefashionadvice and others.

What helps today

In Baymard's testing, shoppers compared their height with the model's ("he's 6'1", so he's a medium") and looked for notes like "runs half a size small". People trust a comparison with a real body more than a table of centimetres.

Insight 1

"Oversized" is ambiguous

Shoppers can't tell if the extra room is in the pattern or needs sizing up.

Insight 2

Bodies beat tables

People judge fit by comparing to a person, not by reading measurements.

Insight 3

Fit is a preference

"Right size" depends on how loose someone wants it, so one answer can't fit everyone.

How might we show a shopper how each size will fall on them, in under a minute?

Target user: someone who knows their usual size elsewhere, likes a relaxed or oversized look, and is buying from a small label for the first time. They won't measure themselves with a tape, but they know their height.

Product page
Fit note and model height next to the size buttons

→

Three questions
Fit preference, height, usual size

→

Drape view
Chosen size on their build, next size dotted

→

Compare
Two sizes side by side with what people like them chose

→

Bag
Size saved to a fit profile for next time

Already sure?
Pick a size straight from the product page and skip Drape

Journey today, from the review threads

Step	Sees a tee they like	Opens the size chart	Searches reviews	Chooses	Delivery
Thinking	"Is oversized already in the cut?"	"What's my chest in cm?"	"Size down, same, size up?"	"I'll get both."	"Too big. Return one."
Feeling	Keen	Unsure	Confused	Anxious	Annoyed

Answer first

Open on a recommendation, not a form. The explanation follows.

No tape measure

Only ask for what people know: height, usual size, and how they like it to fit.

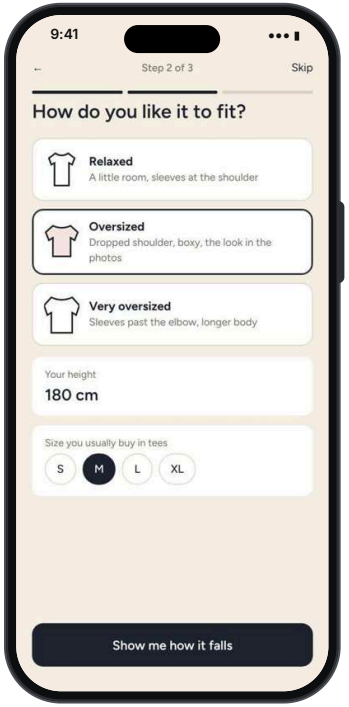

Optional, never a gate

Confident shoppers keep the normal size buttons and never see Drape.

From wireframe to screen, and what I cut on the way.

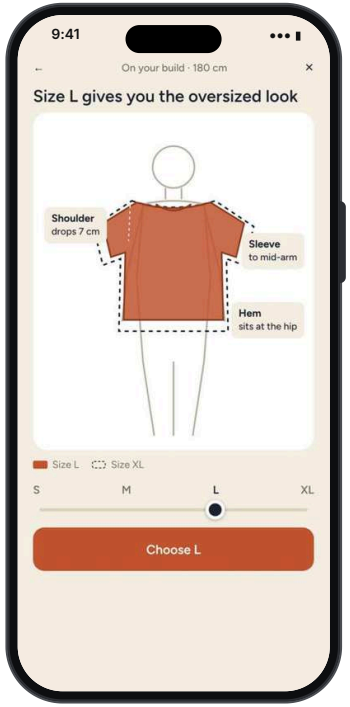

Wireframe: fit questions

UI: fit questions

Wireframe: drape view

UI: drape view

Fit preference comes first
"How do you like it to fit?" is what the reviews were really asking, so it is step one, with drawn silhouettes.

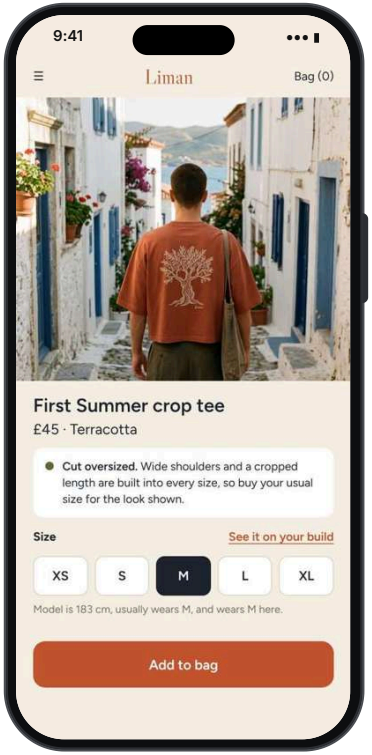

Next size as a dotted outline
Seeing L and XL overlaid answers "should I size up?" without a second screen.

Label the body, not the garment
"Hem sits at the hip" is easier to picture than "length 64 cm".

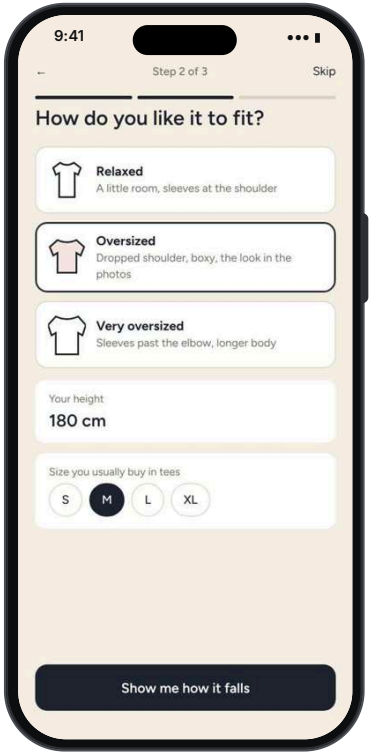

Rejected: a camera body scan. Accurate, but asking for a body photo to buy a T-shirt costs too much privacy and effort.

Cut: an eight-question quiz. Reduced to three things people know without a tape measure.

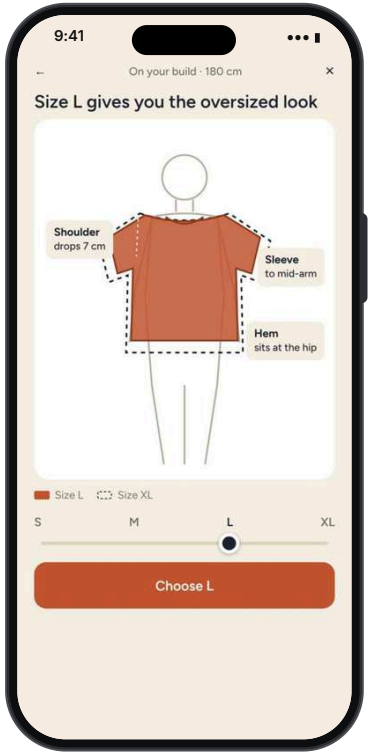

Five screens, one decision: which size to buy.

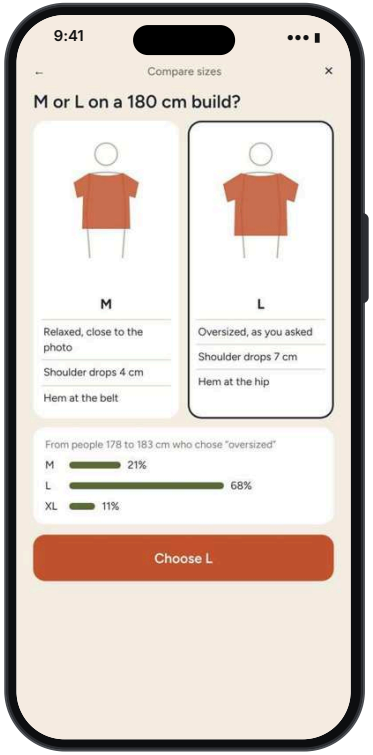

1 Product page
A fit note and the model's height sit beside the size buttons.

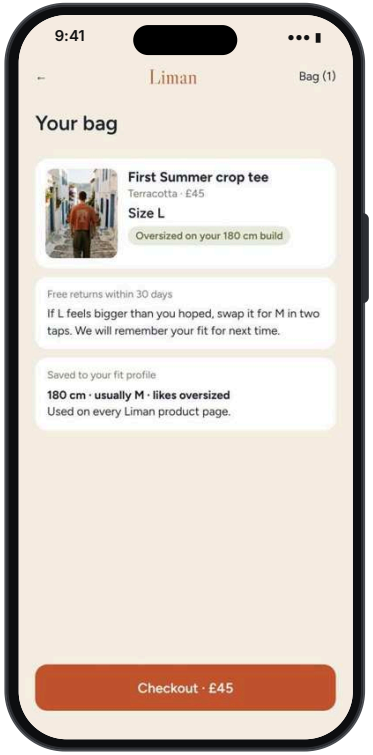

2 Three questions
Fit, height, usual size. No tape measure.

3 Drape view
The chosen size on their build, the next size dotted.

4 Compare
Two sizes side by side, with what similar shoppers chose.

5 Bag
Fit saved to a profile, and an easy swap if it's wrong.

Test plan

5 shoppers on their own phones, task: "Choose a size for an oversized look." Measure time to choose and confidence on a 1 to 5 scale, and ask what they expect to receive.

What success looks like

Fewer "too big" or "too small" returns on oversized lines, and fewer orders containing two sizes of the same item.

What I learned

The useful question was never "what size are you?" It was "how do you like it to fit?" Research changed the first screen.

The comparison percentages on screen 4 are placeholder data for the concept.

Let's make the next decision on screen an obvious one.

I'm looking for a junior UX, UI or product design role in London or remote, and can start straight away.
